## FLEXIBLE OFFSETS WITH A UNIVERSAL TOOL

Offsets in a sheet metal are common in daily sheet metal working. These can be found in case construction, switch cabinets or elevators, in the automotive industry, in heating construction and other areas.

Also continuous offsets can be realised with an offset tool. However, it is sometimes necessary to create the offset height in a different way. **ps:<sup>®</sup>flex-endless-offset** offers the space and the opportunity to produce also flexible offsets.

Shims enable a flexible offset height in 0,1 mm steps. The scope of delivery includes 3x 0,5 mm as well as 5x 0,1 mm shims each for the upper part and the lower part.

Different sheet thicknesses and sheet materials can be processed with **ps:<sup>®</sup> flex-endless-offset** which complete the universal use for offsets.

The **ps:<sup>®</sup>flex-endless-offset** can be produced for the systems TRUMPF, THICK TURRET as well as SALVAGNINI!
