## TOOLS FOR OPTICAL APPLICATIONS

Visible panels are not only used in architecture, in the interior and exterior of private and public buildings, but also in the car tuning sector, where the panels are so specifically designed that a wide range of applications are possible.

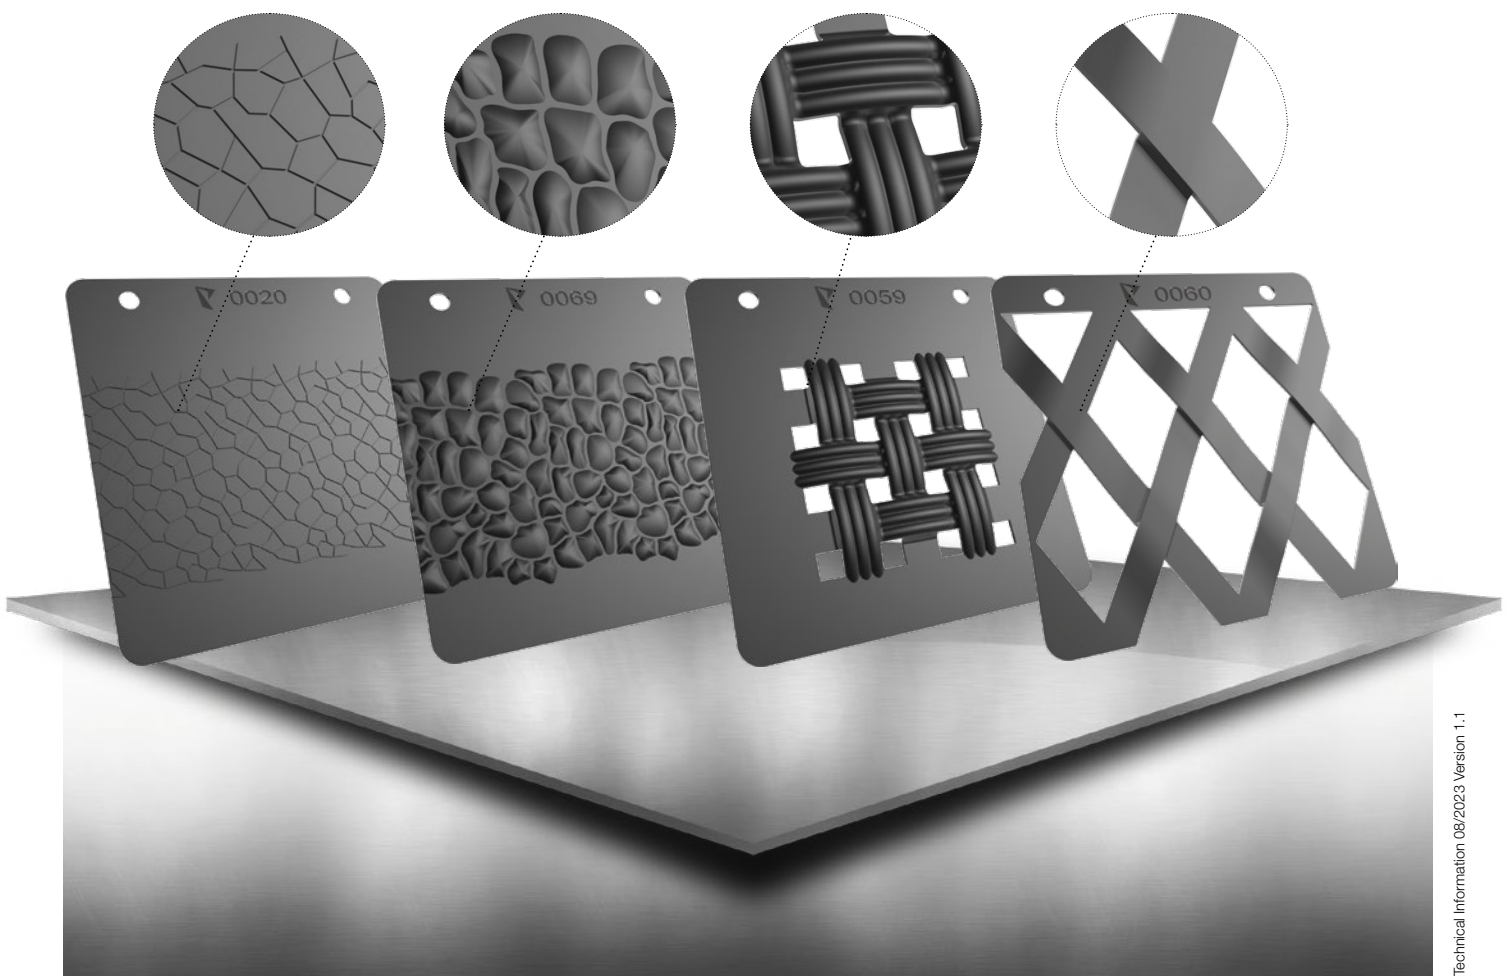

With sheets as expanded metal, textured sheets or other optical sheets, garden chairs, garden tables storage systems and many designed products are manufactured.

This type of PASS tools has the advantage that they can also be used in small areas of a sheet metal panel. By using different types of pre-punching, individual and unique looks can be achieved with just one tool.
